Claims Analysis

Any optionally claimed components are being regarded as not being present in the catalyst composition, method limitations and product claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Murray, et al. (US 6103657 A).

See entire document. Murray, et al. disclose a catalyst composition comprising a magnesium (col. 12, l. 62-67), group 4 transition metal and a halide (col. 14, l. 34-35), an alpha-amino-substituted 2-alkylpyridine compound (col. 8, l. 22-col. 10, l. 35) and an organoaluminum co catalyst compound (col. 15, l. 8-col. 16, l. 4). The catalyst is put into an inert diluent (benzene – col. 18, l. 51). A method of polymerizing ethylene hexene copolymers were contacted with the catalyst composition supra (col. 19, l. 39-col. 36, l. 67).

Allowable Subject Matter

Claims 4 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Prior art of record fails to fairly teach or suggest the specific amino substituted 2-alkylpyridine compounds.
